Experience

Google - Security Engineer **2024 - Present**

- Part of Detection & Response for Insider Threats and Identity Abuse; detecting, building controls, and responding to incidents for Google and its customers.
- Worked on detection latency reduction, reducing our most critical signals from hours to seconds. Leveraged this reduced latency to implement real-time controls to prevent access abuse of customer data, and exfiltration.
- Collaborated across various security teams to drive solutions, designing and driving controls that impacted the entire company.
- Built high-fidelity signals across the enterprise and production domains, detecting account compromise, theft of key material, data exfiltration and access abuse.
- Worked with partner teams to propagate these signals, allowing many systems across the company to use our data as a central knowledge base.

UNSW - Tutor / Course Admin / Guest Lecturer **2022 - Present**

- Was a key member of staff for a number of security engineering subjects: System & Software Security Assessment, Digital Forensics & Incident Response, Web Application Security & Testing, and Security Engineering.
- Built infrastructure, wrote ctf-style challenges, taught classes of ~20 (for tutorials) or ~100-200 (for lectures).

CommBank - Security Engineer (Incident Response) **2023 - 2024**

- Deployed honeypots to detect & impede previously undiscovered TTPs
- Built a centralized malware scanning API, for use across the security engineering org. Developed the deployment pipeline, testing suite and data contracts.
- Uplifted the incident triage process through automation of key tasks: ticket creation/classification, data visualization, and stakeholder outreach.
- Identified coverage gaps for detection/controls through manual hunting.

Education

UNSW **2019 - 2022**

Bachelor of Computer Science (Security Engineering) w/ Distinction
Bachelor of Science (Mathematics) w/ Distinction
